Subject: Fact Sheet #20 (Bioavailability in Butte)
Attachments: Talking Points Community Health Concerns.doc; Bioavailability of Lead and Arsenic in Soil Handout.docx

Sara,

This is what I found on com strat/talking points for bioavailability. Do you want me to start a draft fact sheet? I briefly talked with Charlie about Anaconda's ROD amendment and he re-ran the IEUBK model to get the 400ppm lead action level along with entering the new recommendation of 5 ug/dl from CDC. What do you think about running the model for BPSOU with the 5 and with such a low bio availability (10% compared to 70%), that possibly the number would come out at 1200 or higher...I don't know, just a thought.

Nikia
